CAPABILITIES

What I Build For Clients

ERP

Custom Enterprise Software

Internal dashboards, procurement engines, and inventory tools built with role-based access.

React · Node.js · AntD · MySQL

SaaS

SaaS & Shopify Apps

Official Shopify App Store apps, App Bridge integrations, recurring billing, and webhook pipelines.

Shopify Polaris · GraphQL · Node.js

JAM

Modern Web & Jamstack

Sub-second loading landing hubs, SEO-structured frontends, and dynamic SSR architectures.

Next.js 14 · Tailwind CSS · Vercel

CMS

High-Converting CMS

Lightweight, clean-coded WordPress/PHP themes and portals engineered without bulky page builders.

PHP · WordPress · Bootstrap · jQuery

FLAGSHIP PROJECTS

Deep-Dive Case Studies

CASE STUDY 01

ForthApps ERP & Web Platform

Lead Full-Stack Architect & Frontend Specialist

erp.forthapps.com ↗ forthapps.com ↗

The Challenge

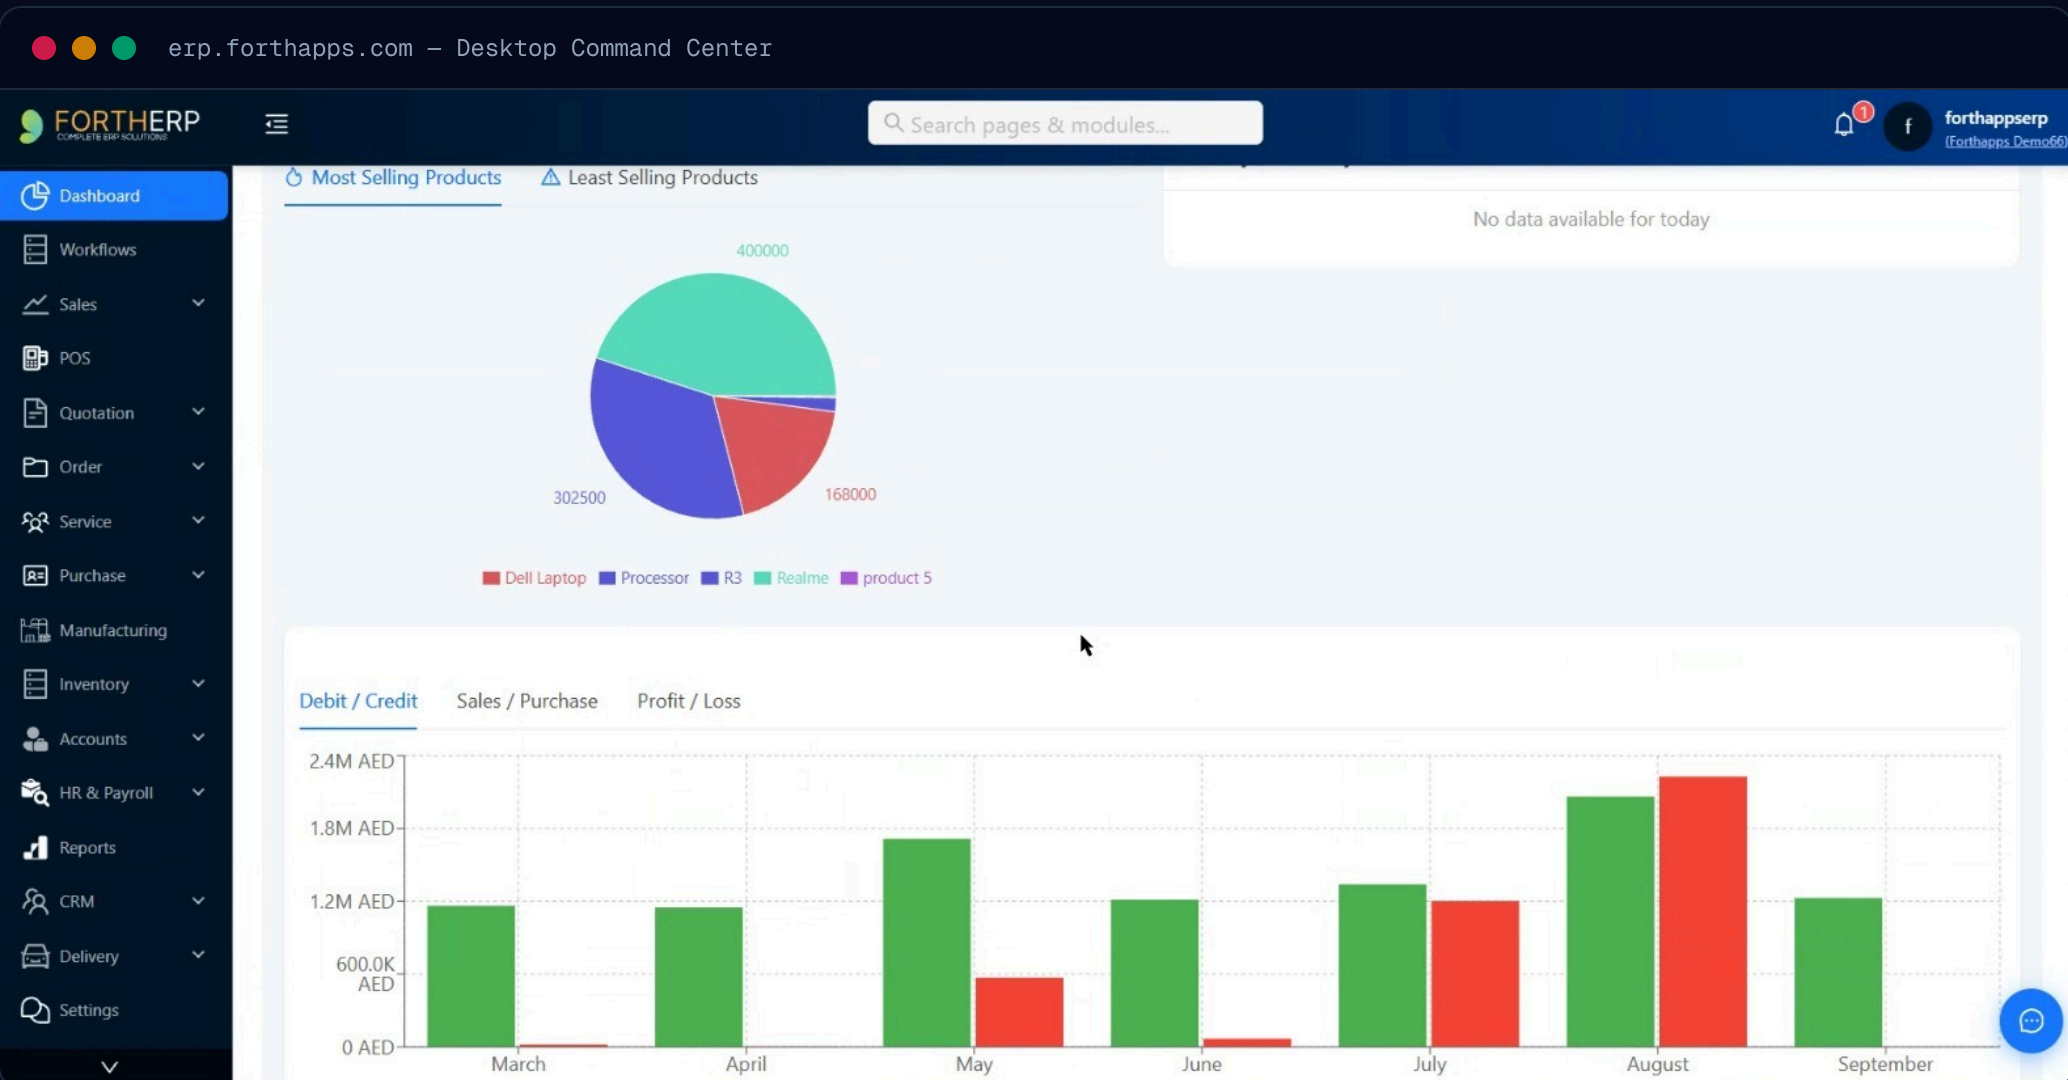

Operational business workflows were hindered by fragmented tools for sales, purchasing, inventory, and field reporting. Staff needed a responsive mobile webview interface for on-site operations alongside a high-density desktop ERP.

The Solution

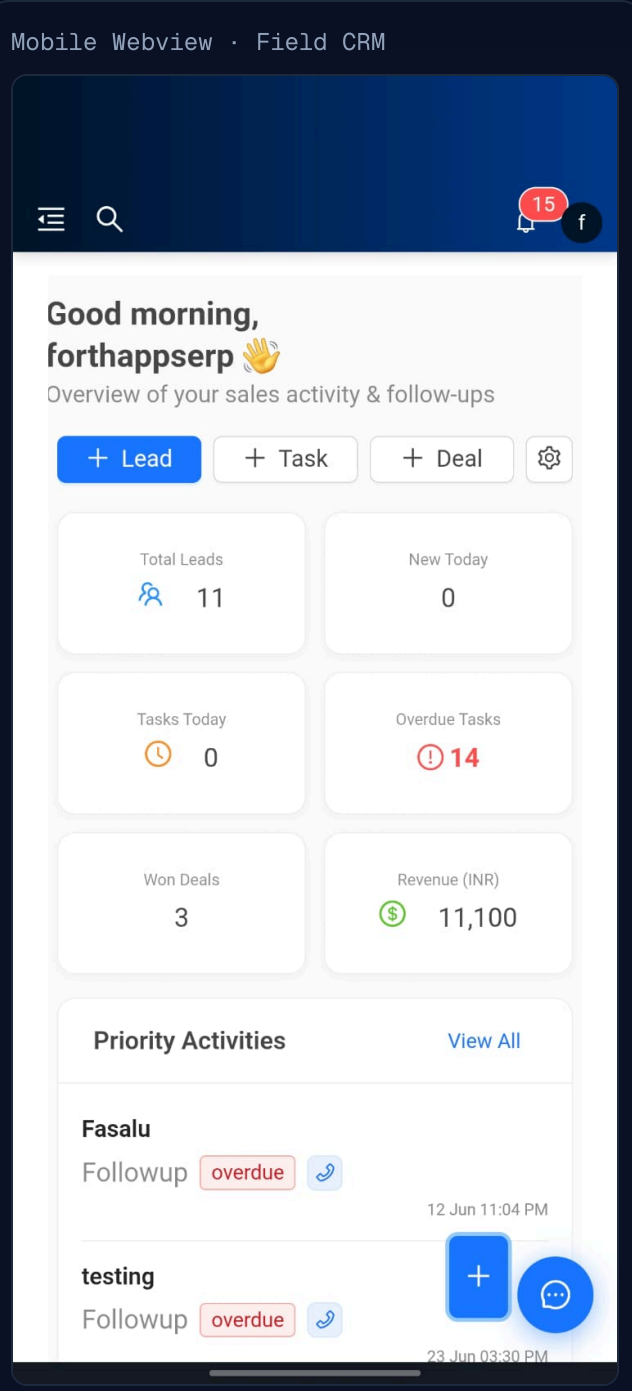

Constructed a Next.js + Tailwind landing platform connected to an Ant Design + React ERP portal. Designed custom responsive CSS layouts enabling high-density data tables and drawers to adapt smoothly to mobile webviews.

Business Outcome

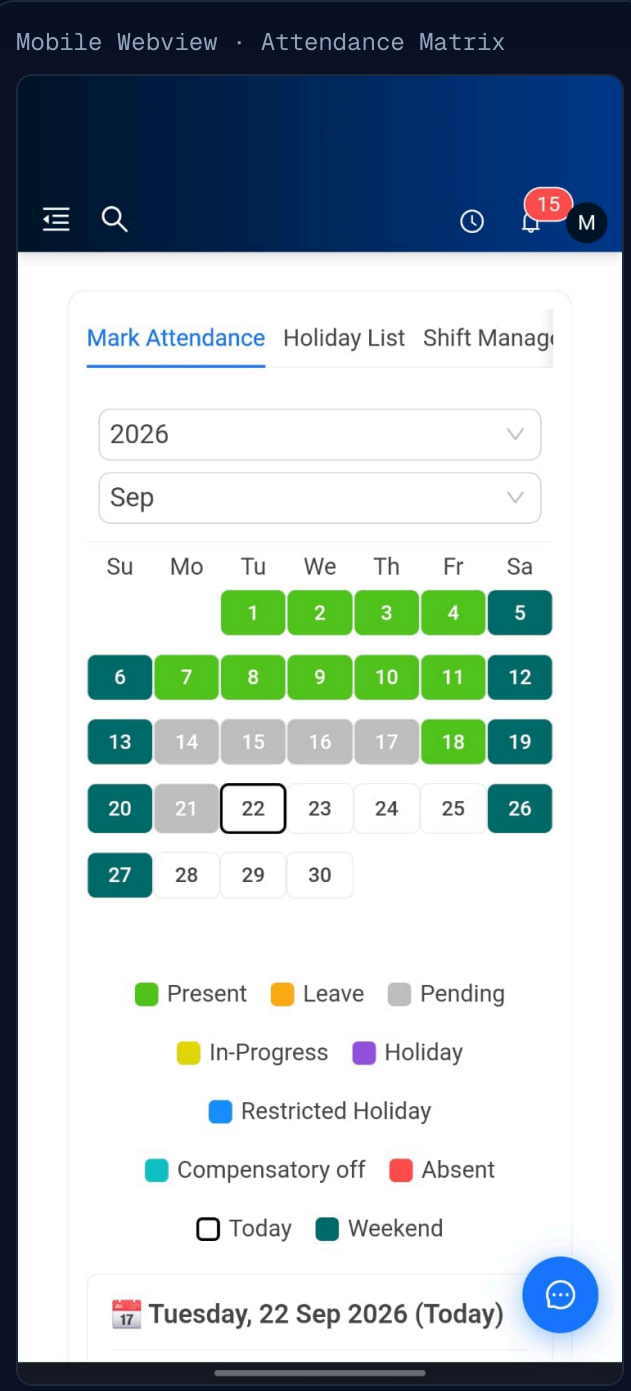

Eliminated duplicate entry by unifying purchasing, sales, and employee onboarding into a single source of truth, achieving seamless mobile adoption for operational staff without standalone native apps.

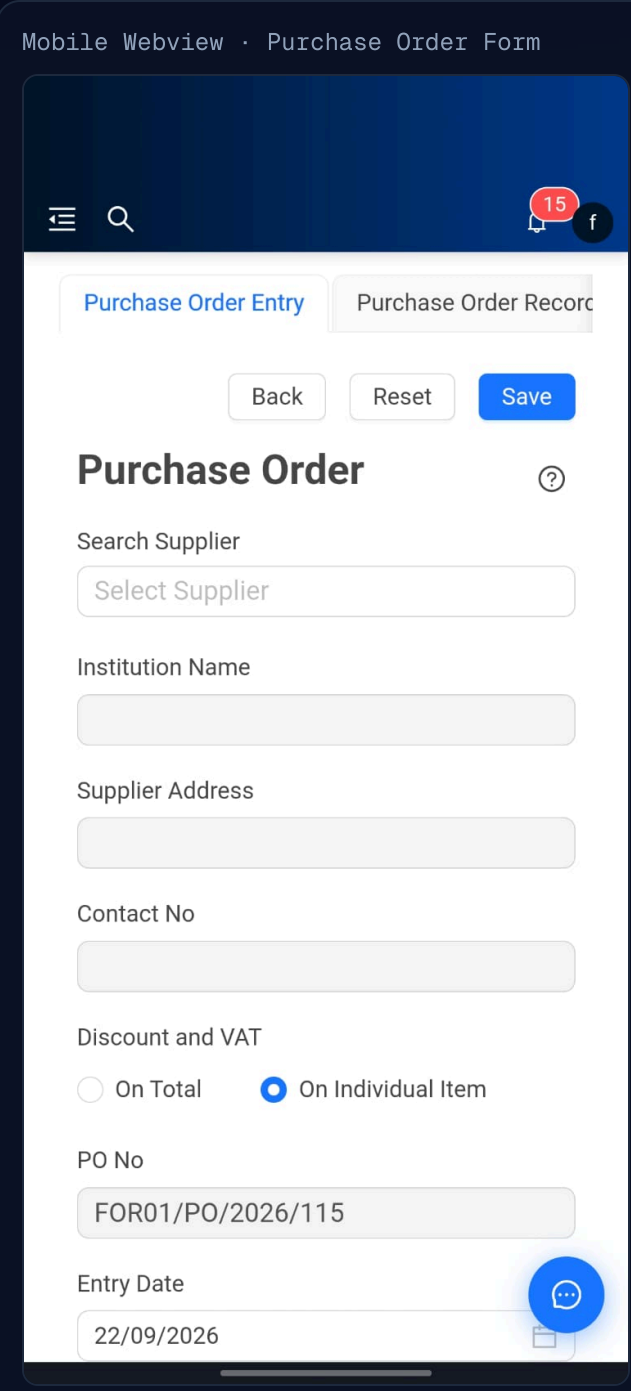

Mobile Webview · Field CRM

Mobile Webview · Attendance Matrix

Mobile Webview · Purchase Order Form

React · Ant Design · Node.js · Express · MySQL · Next.js · Tailwind CSS · Mobile Webview Styling

CASE STUDY 02

ProfitLens Net Profit Tracker

Solo Full-Stack Product Developer

Official App Store Listing ↗

The Challenge

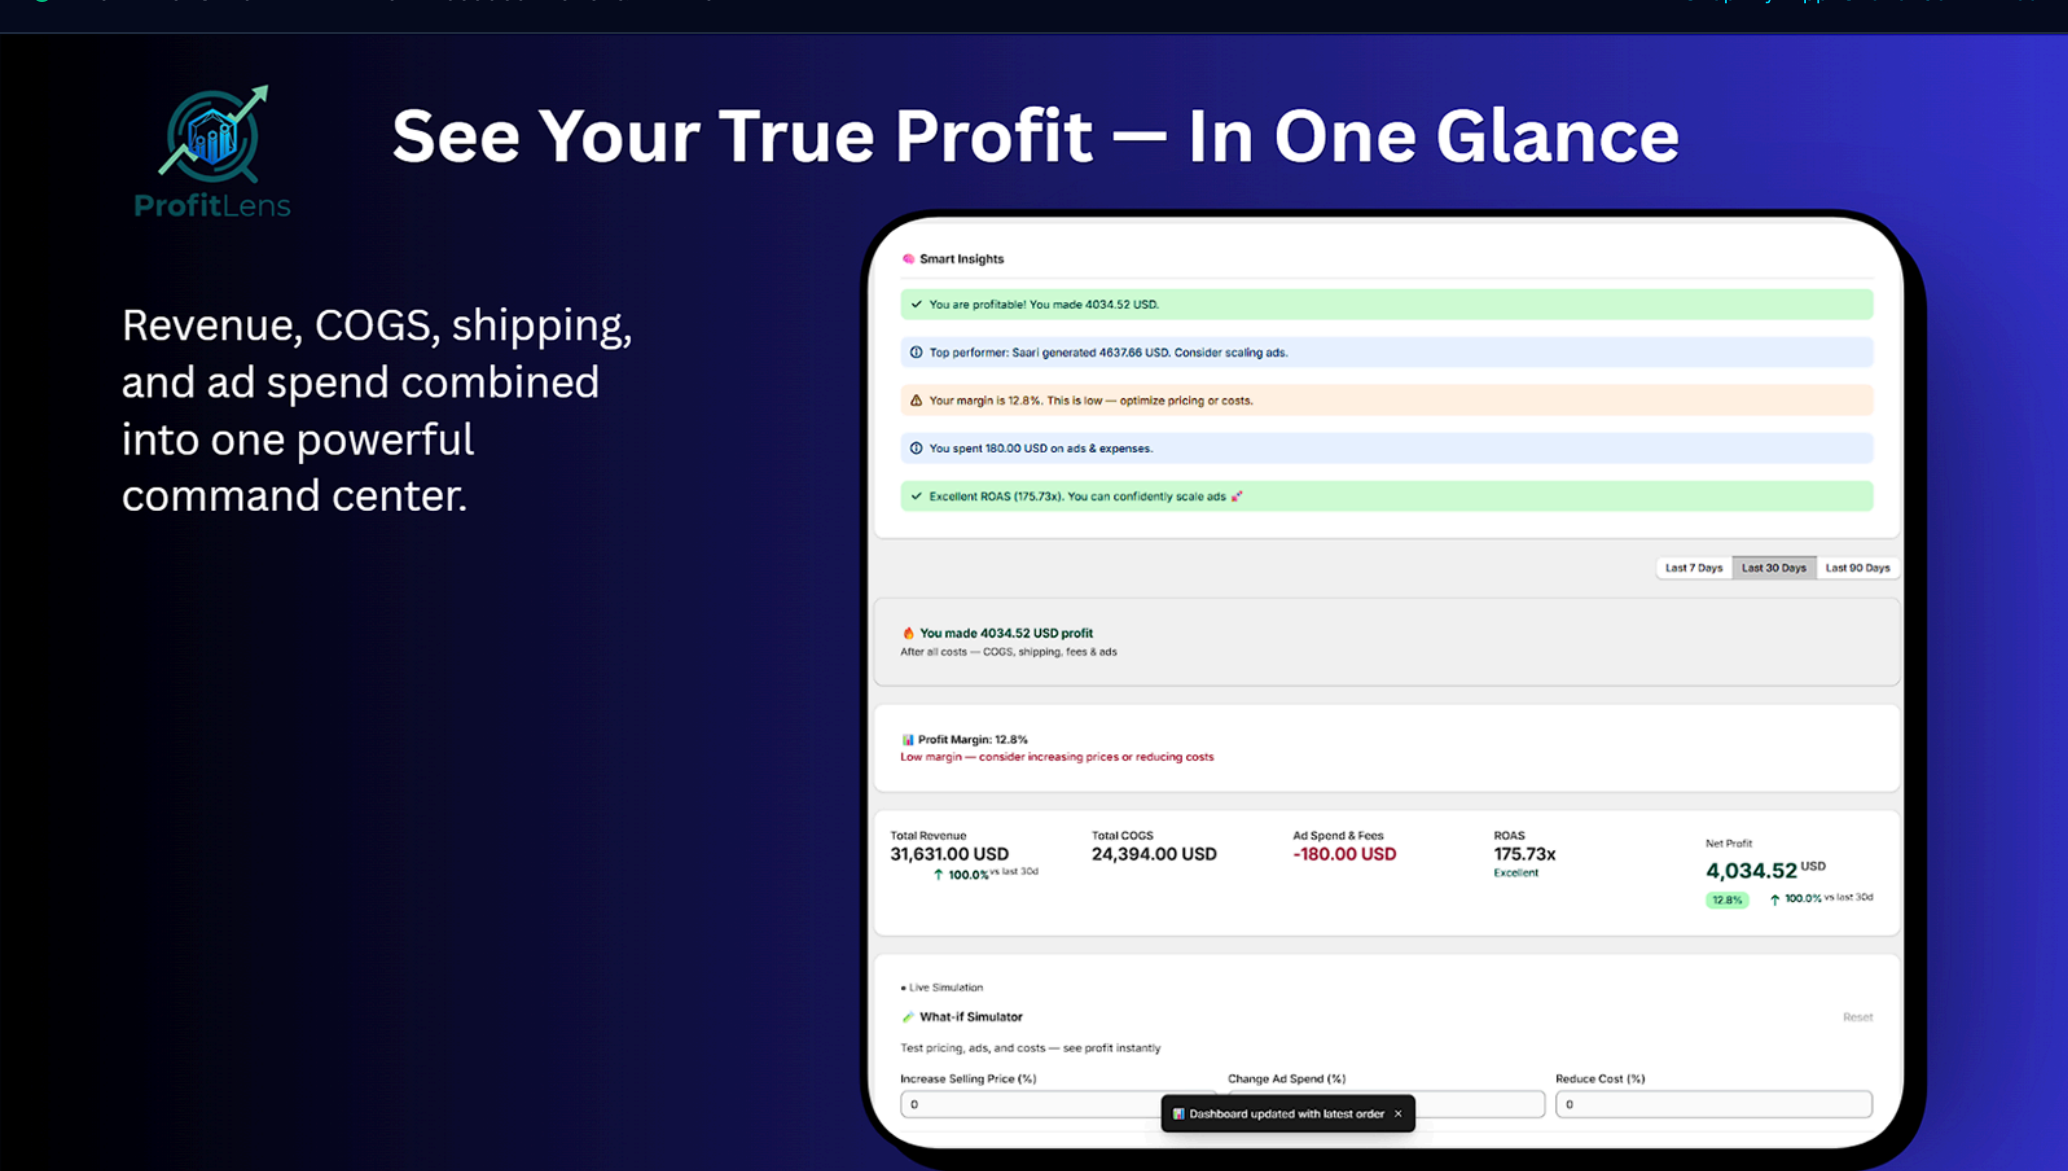

Shopify stores frequently mask thin margins behind high gross revenue. Merchants struggled to track real profit due to hidden ad costs, payment fees, shipping variances, and refunds, relying on hours of error-prone CSV spreadsheets.

The Solution

Engineered an official embedded Shopify application using Shopify App Bridge and Polaris UI. Implemented real-time asynchronous webhook consumers, recurring App Store billing APIs, and a multi-factor profit calculation engine.

Business Outcome

Passed Shopify's rigorous App Store verification and security review. Provides merchants automated real-time margin tracking and SKU-level profit breakdown, saving 5-10 hours per week of manual financial work.

Plug Your Profit Leaks

Transaction Margin Dissection

Flagging negative-margin sales (<21.3%) and isolating cost leaks at the SKU level.

Predict Success Before You Spend

Live Forecasting Engine

Real-time dynamic modeling for ad spend scaling, cost reductions, and target ROAS.

Total Visibility of Every Cost

Total Expense Visibility

Automated multi-platform ad spend distribution, shipping profiles, and fee tracking.

Shopify App Bridge · Shopify Polaris · Node.js · Express · GraphQL Admin API · OAuth 2.0 · Webhooks · Cloud Deployment

WHY WORK WITH ME

Engineering Rigor & Philosophy

01. System-Level Architecture

No Fragile Quick Fixes

Relational schema design, role-based authorization, and resilient API contracts ensure applications withstand real enterprise data loads without breaking.

02. Cross-Device Performance

Desktop to Mobile Webviews

Clean CSS breakpoints and tailored drawer components ensure complex tabular workflows compress naturally into low-bandwidth mobile screens.

03. Maintainable & Bloat-Free

Zero Technical Debt

Handcrafted themes and components built without heavy, unstable third-party builders, ensuring lightning-fast load times and simple long-term maintenance.
